

ANIMAL RIGHTS EDITION

B I N G O

Scientists only use animals to make money	Animals don't predict what will happen in people	Most research is done in cats, dogs, and monkeys	Micro-dosing is a safe and accurate alternative	The polio vaccine was delayed due to the use of monkeys
It's wrong to use animals because they are so similar to us	Animal research is inaccurate because they are so different from us	Laboratory animals suffer great pain and distress	90% of drugs tested in animals fail in humans	All medical research should be done in people
Morphine puts humans to sleep but excites cats	Thalidomide proves animal testing doesn't work	 Animals are tortured	Researchers don't care about the well-being of research animals	Therapies have been delayed because of the use of animals
Computer simulations can predict what will happen in people	Changes in diet and lifestyle can prevent all disease	Less than 2% of human illnesses are seen in animals	Animal research is not regulated	Institutional review committees are a rubber-stamp
"The greatness of a nation ...can be judged by the way in which its animals are treated."	More lives could be saved if we didn't use animals	Animal research has made no contribution to medical progress	Animal research is just like human slavery	Basic research is useless
